

Jett Badalament-Tirrell

New York, NY | jett.b.tirrell@gmail.com | 631-579-7981 | [linkedin.com/in/jettbtirrell](https://www.linkedin.com/in/jettbtirrell)

SKILLS

Programming Languages: Python (Pandas, Scikit-learn, PySpark, NumPy), SQL, R, Excel Functions

Machine Learning: XGBoost, quantile regression, PyTorch, YOLOv8, RAG / FAISS, model evaluation

Platform Tooling: AWS, Databricks, Docker, Jira

Professional Certifications: Databricks Certified Data Engineer Associate, Databricks Certified Generative AI Engineer Associate, AWS Certified Cloud Practitioner

PROFESSIONAL EXPERIENCE

Northwell Health | New York, NY

Senior Corporate Financial Analyst

June 2026 - Present

- Co-lead a decade-long legacy system modernization that transitioned Excel-based workflows to a full-stack web application and trained end users to ensure seamless adoption across CBO and Hospital posting teams

Corporate Financial Analyst

September 2024 – May 2026

- Secured executive buy-in from Vice Presidents and Senior Managers, gaining approval to migrate 140 users onto the new platform and delivering nine training sessions to drive full adoption across the department
- Architected Python and SQL medallion pipelines (bronze, silver, gold) reconciling \$24B+ in annual transactions across five banking institutions, four AR systems, and Northwell's General Ledger
- Automated Batch Distribution Form generation process for Epic Health Systems AR postings, saving an estimated 1,200 hours and \$230,000+ in labor costs across ~3,500 monthly forms
- Designed and deployed a PowerApps platform backed by a relational SharePoint database for data entry, replacing an error-prone shared Excel system, and eliminating ~90% of data entry errors

TECHNICAL PROJECTS

AI Faceless Video Generation Platform

- Architected and deployed a full-stack AI video generation platform, developing the complete codebase in collaboration with Claude Code (VS Code integration) as an AI coding assistant
- Built a cloud-native backend on Neon (serverless Postgres), Upstash Redis for async job queue management, Render for long-running worker deployment, and Cloudflare R2 for storage (no egress costs)

Surgical Procedure Duration Forecasting

- Designed, trained, and deployed machine learning system to predict Mohs (skin cancer removal) surgery duration for UVA Health clinical operations, achieving <10% prediction error on 90% of samples
- Applied XGBoost quantile regression on 10,000+ patient records in a Jupyter notebook using a remote GPU-powered server (Rivanna), demonstrating cloud-based compute practices for model training

Travel Advisor LLM

- Built a production-style retrieval-augmented generation (RAG) pipeline leveraging LLMs and FAISS-based vector search over structured documents, reducing hallucinated locations by 3x
- Built evaluation pipelines to measure hallucination rate, and reasoning performance using GSM8K, and synthetic benchmarks

EDUCATION

University of Virginia | M.S. Data Science, *GPA: 3.9/4.0*

May 2026

University of Virginia | B.A. Cognitive Science
